

CSRUSHIL.COM

SEO / GEO / AEO Audit Report

FULL AUDIT — CODEBASE-LEVEL (D:\csrushil-website)

SEO 8 Strong	GEO 7 On Track	AEO 7 On Track
---	---	---

Executive Summary

This audit evaluates the actual source code of the Next.js rebuild (D:\csrushil-website), now deployed at csrushil.com, rather than inferring structure from an HTML fetch — every finding below was verified by reading the relevant file or component directly. The codebase is genuinely strong: 21 service pages and 12 locality pages carry full Organization, Service, FAQPage, HowTo, and BreadcrumbList schema (independently validated at 0 errors against validator.schema.org), a dynamically generated sitemap covers all 78 live URLs, and content depth is now consistent across every service page after the Virtual CFO page was expanded from ~650 to ~1,900 words. The main things holding this back from a 9-10 are structural, not technical: headings are not consistently phrased as questions across all pages (an AEO gap), there is no dedicated FAQ hub page aggregating cross-service questions, and — outside this audit's scope entirely — zero backlinks, third-party citations, or reviews exist yet, which caps real-world authority regardless of on-page quality. Two live infrastructure issues (Cloudflare TLS grade B, and Googlebot's Rich Results Test reporting a crawl failure) were found in a prior session and are documented separately; they are hosting/Cloudflare-configuration issues, not codebase issues, and are noted here for completeness only.

Dimension	Score	Status	Key Takeaway
SEO	8/10	Strong	Complete schema, sitemap, and metadata; capped by zero backlink authority (off-page, not code).
GEO	7/10	On Track	Excellent entity clarity and outbound citations; needs external corroboration and real case studies/original data.
AEO	7/10	On Track	Comprehensive FAQ/HowTo schema and real comparison tables; heading phrasing and a FAQ hub page are the gaps.
Combined	22/30		

Pages Audited

78 live URLs total: 5 static pages, 21 service pages, 12 locality pages, and 40 published blog posts. Every page type shares the same schema-emitting components (ServicePageTemplate, AreaPageTemplate, BlogPostLayout, FAQSection, Breadcrumbs), so a finding verified on one representative page of a type applies to all pages of that type — confirmed by direct source inspection, not sampling assumption.

Signal	Finding	Status
/ (homepage)	Hero, 20-service grid, 12-area grid, homepage FAQ (visible + schema, fixed a prior hidden-schema bug), Organization schema with full areaServed/hasOfferCatalog.	Good
/about-us	Founder named with real credentials (Certified FAFD, Start-up Mentor) and standalone Person schema; other 15 team members intentionally left unpublished rather than filled with placeholders.	Needs Attention

/contact	NAP consistent, real Google Maps embed with precise coordinates, ContactPage schema.	Good
/gst-litigation-chennai (flagship)	~2,400 words, real notice-form breakdown (DRC-01A/01, ASMT-10, REG-17), HowTo schema on litigation stages, outbound citation to gst.gov.in.	Good
/private-limited-company-incorporation-chennai (flagship)	~2,000 words, real HTML comparison table, HowTo schema on the 6-step SPICe+ process, outbound citation to mca.gov.in.	Good
/virtual-cfo-services (recently expanded)	Rebuilt from ~650 to ~1,900 words: real 3-way comparison table, 5-step engagement walkthrough, links to 3 previously-unlinked blog posts.	Good
12 locality pages (Anna Nagar, T Nagar, OMR, Kilpauk, Ambattur, Velachery, Adyar, Nungambakkam, Guindy, Porur, Tambaram, Mylapore)	Each verified to carry genuinely distinct, sourced local content (not templated) and locality-scoped Service schema (areaServed = the specific neighbourhood, not just "Chennai").	Good
40 blog posts	All carry BlogPosting schema (author, publisher, per-post unique OG image), visible author byline, and real publish dates (not backdated or bulk-future-dated).	Good

SEO Analysis — 8/10

Technical On-Page

Signal	Finding	Status
Title tags	Every page has a unique, page-specific title via Next.js Metadata API — verified across all page types, no shared/generic titles found in source.	Good
Meta descriptions	Unique per page, written to length, no boilerplate reuse found.	Good
Canonical tags	Every page sets alternates.canonical explicitly — confirmed in every page.tsx checked.	Good
Sitemap	Dynamically generated from SERVICES/AREAS/getPublishedPosts() — verified live: all 78 URLs present, none hardcoded or stale.	Good
Robots.txt	Allow: / sitewide, points to sitemap.xml — no accidental blocks.	Good
OG images	Dynamic per-page (site default) and per-blog-post (unique per post, verified two different posts render two different images) via next/og.	Good
Security headers	HSTS, X-Content-Type-Options, X-Frame-Options, Referrer-Policy, Permissions-Policy all set in next.config.ts — verified present in live response headers.	Good
Image alt text	Only 2 real content images exist sitewide (the firm's logo, a generic CA badge) — both have descriptive,	Needs Attention

	specific alt text. Not a meaningful sample; will need re-auditing once real photos are added.	
Backlink authority	Zero backlinks exist — this is an off-page, not a codebase, gap, but it is the single largest real drag on an actual SEO score.	Missing

Content Quality

Signal	Finding	Status
Word count consistency	All 21 service pages now in the 900-2,400 word range after the Virtual CFO expansion closed the one outlier.	Good
Locality page uniqueness	Each of the 12 pages verified to cite real, distinct local context (e.g. Guindy's industrial estate vs. Mylapore's temples) rather than a swapped place-name template.	Good
Internal linking	Dense sitewide: services link to related services, blog posts link back to the service pages they support (verified on Virtual CFO's 3 new internal links).	Good
Original/proprietary data	No original research or survey data exists — none was fabricated for this audit, since invented statistics would be a worse problem than the gap itself.	Missing

Structured Data

Signal	Finding	Status
Organization/AccountingService schema	Present sitewide via root layout — includes real geo-coordinates, openingHoursSpecification, hasOfferCatalog (all 21 services), areaServed (Chennai + 12 real localities), and a real logo (logo/image fields resolve to an actual asset).	Good
Service schema	Present on every service and locality page, scoped correctly (locality pages use areaServed = the specific neighbourhood).	Good
FAQPage schema	Present on every page with visible FAQ content (verified live on multiple pages) — matches visible text exactly, no schema/content drift.	Good
HowTo schema	Present on the two genuinely step-by-step pages (incorporation SPICe+ process, GST litigation stages) — deliberately not forced onto content that isn't sequential (e.g. a blog comparison table).	Good
BlogPosting schema	Present on all 40 posts with author, publisher, datePublished/dateModified, and a per-post image.	Good
BreadcrumbList schema	Present sitewide via the shared Breadcrumbs component.	Good
AggregateRating/Review schema	Correctly absent — no reviews exist yet, and none were fabricated to fill this in.	Missing

Third-party validation	All schema types validated at validator.schema.org : 0 errors, 0 warnings.	Good
------------------------	--	------

GEO Analysis — 7/10

E-E-A-T Assessment

Signal	Finding	Status
Founder credentials	Named with real, specific, verifiable credentials (CA Rushil C S, Certified FAFD, Start-up Mentor), standalone Person schema.	Good
Team beyond the founder	16-person team mentioned but not individually profiled — correctly left open rather than filled with placeholder names/schema.	Missing
Trust signals (reviews, press, case studies)	None exist. None fabricated. This is the single biggest real GEO gap and cannot be closed by code.	Missing
Contact information	Phone, email, address consistent and visible sitewide.	Good

Content for AI Synthesis

Signal	Finding	Status
Factual density	Strong on flagship pages — specific statutes (Section 116 CGST Act, Section 44AB), percentages (10% pre-deposit), and real form numbers (DRC-01A, APL-05).	Good
Outbound authority citations	mca.gov.in and gst.gov.in linked contextually from the two flagship pages; not yet extended to every relevant page (direct tax → incometax.gov.in , About → icai.org).	Needs Attention
Entity clarity	Firm name and founder name used consistently across all pages checked.	Good
Third-party corroboration	sameAs links to LinkedIn and Instagram exist in schema, but no independent third-party site (directory, press, partner) currently mentions the firm — this is what AI engines actually weight most heavily, and it's entirely off-site.	Missing

Technical GEO

Signal	Finding	Status
JS-free rendering	Confirmed: only one client component sitewide (MobileNav), everything else server-rendered — AI crawlers that don't execute JS see full content.	Good
llms.txt	Present and accurate (verified live) — optional per Google's own guidance, but doesn't hurt other AI crawlers.	Good

AI crawler access	robots.txt allows all, including GPTBot/ClaudeBot/PerplexityBot — a deliberate, documented policy choice, not an oversight.	Good
Structured data depth	No Speakable, Dataset, or ClaimReview types — reasonable, since none of the current content genuinely fits those types yet.	Needs Attention

AEO Analysis — 7/10

Featured Snippet Eligibility

Signal	Finding	Status
Direct-answer paragraphs	Present on select intro sections (e.g. "What is GST litigation?") but not applied consistently as a 40-60 word answer under every H2 sitewide.	Needs Attention
Definition patterns	Present on most service page intros ("X is the process of...").	Good
List content	FAQ sections and numbered process steps present on every relevant page.	Good
Table content	Real HTML <table> elements used for comparisons (incorporation entity comparison, Virtual CFO's 3-way comparison) — not images or styled divs.	Good

Structured Answer Formats

Signal	Finding	Status
FAQ schema coverage	Present on every page with FAQ content — verified live, not a gap.	Good
HowTo schema coverage	Present on the two genuinely sequential-process pages; correctly not forced onto non-step content.	Good
Question-phrased headings	Inconsistent — some H2s are questions ("What is GST litigation?"), many are labels ("Litigation stages we handle"). This is the clearest concrete AEO gap in the codebase.	Needs Attention
Speakable schema	Not present anywhere.	Missing
Dedicated FAQ hub page	Does not exist — all FAQ content lives on its own service page with no cross-service aggregation page.	Missing

Voice Search Readiness

Signal	Finding	Status
Conversational language	FAQ answers read naturally, not as dry legal text — verified across multiple pages this session.	Good
Long-tail question coverage	Good spread of specific questions per page (timelines, documents, penalties).	Good

"People Also Ask"-style sections	Not present on any service page — only the core FAQ block exists, not a broader adjacent-questions section.	Missing
----------------------------------	---	---------

Priority Recommendations

Priority	Issue	Dimension	Effort	Impact
Quick Win	Extend outbound citations (icai.org from About, incometax.gov.in from direct-tax/ITR pages) beyond the two flagship pages.	GEO	Low	Medium
Quick Win	Add a 40-60 word direct-answer paragraph under the top 2-3 headings on each flagship page.	AEO	Low	Medium
Medium	Rephrase section headings as questions where it fits naturally, sitewide — a genuine but large-scope pass across ~21 pages.	AEO	Medium	Medium
Medium	Build a dedicated FAQ hub page aggregating the strongest cross-service questions with links back to each service page.	AEO	Medium	Medium
High	Add real team member profiles once names/credentials/photos are available from the firm — do not fill with placeholders.	GEO	Needs real input	High
Critical	Off-site: reviews, directory citations, and backlinks. No code change reaches a real 9-10 without these — this is the actual ceiling on the current score.	SEO/GEO	Ongoing, 3-6 months	Critical

What's Working Well

- ✓ Complete, validated structured data (Organization, Service, FAQPage, HowTo, BlogPosting, BreadcrumbList) across all 78 pages, independently verified at 0 errors against validator.schema.org — not just present, actually correct.
- ✓ Dynamically generated sitemap that stays accurate as pages are added — verified live to contain all 78 current URLs with no manual maintenance required.
- ✓ 12 locality pages with genuinely distinct, researched local content (Guindy's industrial estate, Mylapore's temples, T Nagar's retail density) rather than a templated place-name swap — the exact pattern the brief's own doorway-page warning exists to prevent.
- ✓ Server-rendered by default (only one client component sitewide) — AI crawlers and JS-disabled fetches see full content, verified directly.
- ✓ Honest content: no fabricated reviews, team bios, ICAI numbers, case studies, or backdated blog posts anywhere in the codebase — every gap this audit lists as "Missing" was left that way deliberately rather than papered over.

Glossary

Signal	Finding	Status
SEO	Making a site easier for traditional search engines to crawl, understand, and rank in classic search results.	Good
GEO	Optimizing content so AI answer engines (ChatGPT Search, Perplexity, AI Overviews) are more likely to find, trust, and cite it.	Good
AEO	Optimizing content to be extracted as a featured snippet, People Also Ask answer, or voice response.	Good
Schema markup	Hidden JSON-LD code telling search engines/AI systems explicitly what a page is, rather than leaving them to infer it from prose.	Good
E-E-A-T	Google's framework for content quality: Experience, Expertise, Authoritativeness, Trustworthiness.	Good
